PROFESSIONAL SUMMARY

Full-Stack Software Engineer and Technical Product Leader with 9 years of experience building scalable SaaS products and AI-powered platforms for enterprise and Fortune 500 clients. Expertise in full-stack development, multi-tenant architecture, and secure system design, with a proven track record of leading compliance-critical initiatives, driving cross-functional teams, and delivering measurable business outcomes.

EXPERIENCE

Senior Software Engineer

Ai Media Group | New York, NY | March 2020 – August 2025

- Pioneered a front-end migration from AngularJS to Vue.js that transformed an internal admin tool into a market-ready SaaS product, directly driving the decision to redesign and launch Atrilyx as the company's client-facing platform.
- Led end-to-end development of Atrilyx, building AI-powered analytics dashboards that delivered real-time cross-channel attribution and customer journey insights for 300+ SaaS clients logging 10M+ daily events.
- Conceived and owned a company-wide SSO portal as a custom React SPA with a state-persistent drag-and-drop widget system, centralizing secure access for 120+ employees and reducing onboarding time by 40%.
- Architected full-stack multi-tenant data isolation for Atrilyx, redesigning the database schema to support client-scoped data access, enabling each client to manage multiple site dashboards while ensuring zero cross-tenant data exposure.
- Designed a scalable plugin system for Atrilyx, building each plugin end-to-end with dedicated Vue.js components, API endpoints, and database schemas, enabling rapid feature expansion without disrupting core platform stability.
- Introduced Power BI into Atrilyx by engineering the embed token auth flow for secure API access, implementing Row-Level Security across a three-tiered access model, and designing an internal admin UI to grant report permissions.

Technical Project Manager

Aetna | Hartford, CT | March 2018 – August 2019

- Led delivery of multiple concurrent Agile projects, owning the roadmap in Jira and coordinating across scrum teams to align on timelines, milestones, and goals from kickoff through successful production launch.
- Independently conducted HIPAA and PII compliance audits throughout the project lifecycle, identifying regulatory risks early and coordinating resolutions to ensure audit-ready delivery.
- Served as the primary bridge between engineering, product, design, and executive stakeholders, translating business requirements into technical specifications, facilitating prioritization decisions, and ensuring cross-functional clarity.

Java Developer

Aetna | Hartford, CT | April 2017 – March 2018

- Contributed to migrating Aetna's backend architecture from a monolithic system to microservices within a 12-engineer scrum team, enabling distributed teams to develop features in parallel and accelerating delivery speed by 75%.
- Implemented OAuth2 to secure sensitive customer PII on Aetna's mobile app, enforcing secure token storage and a background token refresh strategy to maintain seamless, uninterrupted user sessions.
- Drove cross-team alignment on the microservices migration by proposing a structured migration plan with rollback checkpoints that addressed engineer concerns about disrupting live production, resulting in promotion to Technical PM.

IT College Assistant

City University of New York | New York, NY | September 2013 – November 2016

- Provided IT support across an 80-acre campus, managing system re-imaging, hardware troubleshooting, software support, and network issue resolution for students, faculty, and staff while completing a full-time undergraduate degree.

CURRENT PROJECT

Kary Waves App

React Native, TypeScript, Fastify, PostgreSQL | March 2026 – Present

Developing a mobile application for a NYC-based apparel manufacturing company to enable clients to get project progress updates, team in-app messaging, manage bookings, and access project files in one centralized platform. Currently in TestFlight beta, releasing iterative updates based on user feedback and testing insights ahead of a planned App Store launch.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL	Databases: PostgreSQL, MySQL, MongoDB, Databricks
Frontend: React, React Native, Vue.js, Angular	Cloud & DevOps: Microsoft Azure, AWS, Docker, CI/CD, Git
Backend: Node.js, REST APIs, OAuth2, JWT	Testing & Tools: Jira, Jest, SuperTest, Selenium, Postman, Expo, GTM, Power BI, Claude, Codex

EDUCATION

Bachelor of Science in Computer Science and Applied Mathematics | CUNY Queens College | June 2016
