Full-Stack Software Engineer

PROFESSIONAL SUMMARY

Software and product engineer with 9 years of experience building secure, data-intensive SaaS and enterprise applications across React, TypeScript, Vue.js, Node.js APIs, and multi-tenant architectures. Strong at translating business workflows and client operations into scalable product systems, auth, analytics dashboards, and data visualizations.

EXPERIENCE

Product Engineer

Macancela Technologies | New York, NY | January 2026 - Present

- Partner with fashion designers and brand stakeholders to turn early-stage ideas into production-ready products, leading discovery meetings to define goals, requirements, scope, timeline, and milestones.
- Own delivery from product planning and prototyping through engineering, quality assurance, launch, and advertising conversion tracking, translating client needs into technical requirements and coordinating reviews with the engineering team.
- Built an internal client operations portal and React Native app for Kary Waves, centralizing project tracking, bookings, messaging, and file storage while implementing speech-to-text to transcribe spoken words into structured project tickets.

Senior Software Engineer

Ai Media Group | New York, NY | March 2020 - August 2025

- Led React/TypeScript and Vue.js frontend modernization, migrating AngularJS admin workflows to Vue.js and helping launch Atrilyx as the company's client-facing SaaS analytics platform.
- Built AI-powered analytics dashboards backed by Node.js/REST APIs, delivering real-time cross-channel attribution and customer journey insights for 300+ SaaS clients logging 10M+ daily events.
- Conceived and owned a company-wide React/TypeScript SSO portal with JWT-authenticated access patterns and persistent drag-and-drop widgets for 120+ employees, reducing onboarding time by 40%.
- Architected full-stack multi-tenant data isolation for Atrilyx, redesigning schemas and access controls so each client could manage multiple site dashboards with zero cross-tenant data exposure.
- Designed a scalable plugin system for Atrilyx with Vue.js components, Node.js API endpoints, and dedicated database schemas, enabling rapid feature expansion without disrupting core stability.
- Introduced Power BI into Atrilyx by engineering secure embed token auth, implementing row-level security across a three-tiered access model, and designing an internal permissions UI.

Technical Project Manager

Aetna | Hartford, CT | March 2018 - August 2019

- Led delivery of multiple concurrent Agile projects, owning Jira roadmaps and coordinating scrum teams from kickoff through successful production launch.
- Conducted HIPAA and PII compliance audits throughout the project lifecycle, identifying regulatory risks early and coordinating resolutions for audit-ready delivery.
- Bridged engineering, product, design, and executive stakeholders by translating business requirements into technical specifications and prioritization decisions.

Java Developer

Aetna | Hartford, CT | April 2017 - March 2018

- Contributed to migrating Aetna's backend architecture from a monolith to microservices within a 12-engineer scrum team, enabling parallel feature delivery and accelerating release speed by 75%.
- Implemented OAuth2 for sensitive customer PII in Aetna mobile app flows, enforcing secure token storage and background token refresh for uninterrupted sessions.
- Proposed a structured microservices migration plan with rollback checkpoints that addressed production-risk concerns and led to promotion into Technical PM ownership.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL

Frontend: React, React Native, Expo, Vue.js, Angular

Backend: Node.js, Fastify, REST APIs, OAuth2, JWT

Databases: PostgreSQL, MySQL, MongoDB, Databricks

Cloud & DevOps: Microsoft Azure, AWS, Docker, CI/CD, Git

Testing & Tools: Jest, SuperTest, Selenium, Postman, Power BI

EDUCATION

Bachelor of Science in Computer Science and Applied Mathematics | CUNY Queens College | June 2016
